

Apple IOS

- Voice Over
- Zoom
 - lets you magnify the entire screen of any application you are using to help you see what is on the display. Double-tap on the screen to enable Zoom, then you can adjust the magnification from 100% to 1,500%.

Apple IOS

- Siri
- Speak Screen
 - reads the contents of a page back to you, for example you can use Speak Screen to read out your email, iMessages, webpages, and books. This may be helpful if you have a hard time reading the text on your device.

Apple IOS

- Dictation
- FaceTime
- Font Adjustments
- Invert Colors and Grayscale
- Visible and Vibrating Alerts

Apple IOS

- Mono Audio
- Closed Captions
- Switch Control
- Rotor
- Guided Access

Android

- Talkback
- Voice Access
- BrailleBack
- Switch Access
 - lets you interact with your Android device using one or more switches. This can be helpful for users with mobility limitations that prevent them from interacting directly with the Android device. This feature only applies to devices running Android 5.0 and higher.

Android

- Magnification Gestures
- Large Text
- Font sets
- High Contrast Text

IOS and Android

- Loads and loads of different APPs, themes, launchers and Accessibility aids

For next session ð

Thank You
